

Matthew Cendana

San Jose, CA | 408-504-5997 | matthewcendana.business@gmail.com | matthewcendana.dev | [LinkedIn](#) | [GitHub](#)

EDUCATION

University of California, Santa Cruz

Expected Graduation: Dec 2027

B.S. Technology & Information Management, Computer Science Minor | GPA: 3.75

- Coursework: Data Structures & Algorithms, Computer Architecture, Database Management Systems, Machine Learning, Data Analysis in Python

SKILLS

Languages: Python, SQL, TypeScript, Java, C++, JavaScript

Frameworks & Libraries: React, Next.js, Angular, NgRx, PySpark, pandas, LlamaIndex, Streamlit

Cloud & Infrastructure: AWS (Lambda, EC2, DynamoDB, S3), Docker, Databricks, Firebase, Supabase

Data & Tools: PostgreSQL/PostGIS, Redis, Apache Spark, Delta Lake, REST APIs, Git

EXPERIENCE

Full-Stack Developer

June 2026 – Present

Tech4Good UCSC

Santa Cruz, CA

- Built Compass, a full-stack goal-setting web app, with a 5-person Agile team in Angular and Firebase
- Adopted an agentic workflow using Claude Code and a shared skills repo to scaffold component architecture
- Owned Git workflows across 5 contributors, reviewing PRs and resolving merge conflicts to keep main clean

Data Extraction Extern

June 2026 – Aug 2026

Extern — Pfizer Sponsored Project

Remote

- Automated extraction and classification of key fields (dates, vendor, type) across 500+ regulatory PDFs
- Tuned a LlamaIndex RAG pipeline against LLM, OCR, and chunking benchmarks to 81% answer accuracy
- Shipped a fully offline chatbot unifying OCR, metadata filtering, and vector search with page citations

Data Engineer Intern

June 2025 – Sep 2025

Cooledtured Collections

Bensenville, IL (Remote)

- Built a Python scraping and ETL pipeline aggregating 20,000+ posts across Reddit, YouTube, and online forums
- Implemented a RAG sentiment scoring pipeline powering a Streamlit dashboard of per-title scores
- Prototyped a Firebase analytics tool replacing the marketing team's Excel workflow; adopted by the team

PROJECTS

AtlasEDM | Docker, C++, PostgreSQL, Redis, Next.js, TypeScript

Sep 2026

- Shipped a geospatial platform (Next.js, C++, PostGIS, Redis) serving 8,000+ live events on a Mapbox map
- Hardened the public API with per-IP rate limiting, strict CORS, and a network-isolated database
- Containerized the stack with Docker across two clouds; a scheduled Python ETL syncs events daily

AI Sentiment Lakehouse | Databricks, Apache Spark, Python, SQL

July 2026

- Built a medallion-architecture lakehouse on Databricks, ingesting 13,000+ posts scraped from HN and Reddit
- Transformed data through silver and gold layers in PySpark and SQL, scoring post sentiment with an LLM
- Guarded scheduled runs with automated data quality checks and a regression test suite; published on Kaggle

PinTheSlug | TypeScript, React, Google Maps API, Supabase

Jan 2026

- Built the Supabase backend for a GeoGuessr-inspired campus game with a team at CruzHacks 2026
- Designed schemas and functions for location data, scores, leaderboards, and Google OAuth sign-in
- Integrated the database with a React frontend, shipping a game used by hackathon attendees
